i have 1 last question, when you sat source and destination my mind understand that the process will create new table in oracle and full it wiith data from excel but what if there is an existing table already in oracle can i do mapping in columns between the two tables ?

thanx

You don't need the SQL Server relational engine. Yes, SSIS is graphical. In your case, you would have Excel as a data source and Oracle as a destination. You would then create a data flow between them. Check out:

<http://www.wrox.com/WileyCDA/WroxTitle/productCd-0764584359.html>

It's a very good text. SSIS is definitely worth learning.

is SSIS a graphical tool ?

and if sql is not installed how can i use it between Oracle and Excel ?

"Tom Moreau" wrote:

SSIS comes with SQL Server at no extra charge. You can  
pump between

Oracle

and Excel without having to go through any intermediary.  
Why pay for a

3rd

party tool?

thanks

but if i use also oracle and excel dont you think third party tool is

easier

such as altova databasespy ?

Use SQL Server Integration Services (SSIS),  
using Excel as the source

and

SQL Server as the destination. Alternatively,  
you may be able to create

a

linked server to the Excel workbook and  
then use T-SQL to pull the data.

I was wondering do SQL Server 2005 has a  
built in tool to import data

Re: Importing data from excel

from

excel table to a sql table ?
