Hi,

can anyone suggest me in doing the transformation from xml to xsl

i have a column in my DB which is of xml datatype.
for eg this is my xml content in the column.

```
<Team name="Braves">  
<Players>  
<Pitcher name="John Smoltz" role="Closer" />  
</Players>  
</Team>
```

i need to select this xml column and do the transformation .
direct tranformation from xml to xslt is fine,i require how to select
from the sql and pass it

thanks in advance

Rajesh
