: : I have a form tag in my page. I want that when enter key is pressed it
: : should not submit the form. I have set action="" but no use.
:
: Another way is...
:
: If you change this:
:
: <input type="submit" value="Submit" />
:
: to:
:
: <input type="button" value="Submit" onclick="document.form.submit()" />
:
: it will only submit with the click of a mouse and not with Enter.
:
: There are still other ways to perform this too.

form = form name
