I noticed I was receiving JAVA script errors a few weeks ago on all my Microsoft Windows XP SP2 machines. Examples of the IE errors are as follows on a particular web-site:

Line: 83
Char: 1
Error: Object expected
Code: 0
URL: <http://www.gsa.gov/Portal/gsa/ep/home.do?tabId=0>

and

Line: 1840
Char: 5
Error: Syntax error
Code: 0
URL: <http://www.gsa.gov/Portal/gsa/ep/home.do?tabId=0>

I have checked my IE option settings with non issue machines and recommendation from Microsofts websites and have reinstalled WINXP on test machines and applied all updates and still have the same results. I have tried different ISP connections (broadband and dial-up) and even noticed it though less frequently loading Windows2000ProSP3. I have also disabled the WindowsXP firewall.

.
