Hello all,

This is a bit strange. My index.htm file contains the following JSCRIPT include command:

```
<script language="JavaScript" src="http://www.AnotherDomainName.com/Jscripts/Ascript.js" type="text/javascript"></script>
```

The Ascript.js file has the following code:

```
document.write("<iframe id='Iframe1' src='http://www.AnotherDomainName.com/Morescript.aspx' width='100px' height='93px' frameborder='0' scrolling='no' allowtransparency='true'></iframe>");
```

The problem is that when I access the website www.mydomain.com it seems that the script doesn't run but when I access www.mydomain.com/index.htm directly it works ok.

Your help is appreciated.
Thanks.
