- 

I'm loading an xml and doing selectSingleNode(//\*[xpath])  
xpath is with namespace attribute.

```
var xmlStr="<R AB:I='1' xmlns:AB='urn:MynameSpace'><I  
xmlns:AB='urn:MynameSpace' AB:I='2'/></R>"
```

```
var abc=new ActiveXObject("MSXML2.DOMDocument.4.0");  
abc.async=false  
abc.loadXML(xmlStr)  
abc.setProperty("SelectionLanguage", "XPath");  
abc.setProperty("SelectionNamespaces", "xmlns:AB='urn:MynameSpace'");  
alert(abc.documentElement.xml)//xmml i coming proper
```

```
DNode=abc.documentElement.selectSingleNode("//*[AB:I=2]");
```

```
alert(DNode)//this is coming as null
```

thanks,  
praveen.
