Hi,

I want to know how to send an email with Java Script or VB Script ,
this email contain only a string

On the client? You don't. On the server you can. Submit a form to the
server. Ask in a group that deals with the server side language you have
available to you.

I haven't ASP in my server, but Front Page Extension only. I have a
string that I want to send it by email.

Is there any method to do that ?
