The scripting website has an example of how to copy the event logs to a db. I want to modify this and just copy the security logs to a db. Below is the relevant portion of that code:

```
Set colRetrievedEvents = objWMIService.ExecQuery _  
("Select * from Win32_NTLogEvent")
```

To modify this for the Security logs, do I change the code to:

```
Set colRetrievedEvents = objWMIService.ExecQuery _  
("Select * from Win32_NTLogEvent Where Logfile _  
='Security'")
```

I would greatly appreciate any input on this subject.

Thanks,

Scott
