

How to set a timeout on a send method?

I have been looking all over for a way to time out a send method in vbscript. I have a vbscript that checks the stats of a web page on a server in my web farm and then act on that status. It will then sleep for awhile and check the status again. The problem is sometimes the OK status will come back after about 5 minutes or so. I don't want the script to wait that long to get the status. If it takes more than a minute, I want the status to be in a fail state whether it comes back 5 minutes later or not. Basically, more than a minute is not acceptable. How can I do that in vbscript. Here is bit of my code:

```
<snip>
dim oHTTP
set oHTTP = WScript.CreateObject("Microsoft.XMLHTTP")
oHTTP.open "GET", sSource, False
oHTTP.send
</snip>
```

It is oHTTP.send I want to set a timeout on. If it does not get a response in one minute cancel the request and move on to the next function in the code.

Thanks in advance to anyone that has any suggestions.
