Sounds like you might need the MS CHM file documentation. Use the index to look up the Run method, and there's a full syntax description.

The WSH (VBScript and JScript) CHM download contains general concepts, syntax, etc. For the WSH CHM documentation download or any updates, use the following urls:

<http://www.microsoft.com/downloads/search.aspx?displaylang=en>
The MS Download Center (English Language)

<http://www.microsoft.com/downloads/results.aspx?productID=478EA476-5552-479E-A200-2C33FFD43F24&freedom>
WSH Updates, Documentation and Utility Downloads (English Language)

<http://www.microsoft.com/downloads/details.aspx?FamilyID=01592c48-207d-4be1-8a76-1c4099d7bbb9&DisplayL>
Windows Scripting Documentation Download (English Language)

For WSH downloads in languages other than English, click on The MS Download Center link, then select the desired language and click the Go button in the Worldwide Downloads drop-down box. Once in the appropriate language, select the equivalent of the Windows Script category in the Product/Technology drop-down box, and then click the Go button in that box.
