I've tried that and it doesn't work it still display the error. Beside I've tried using the On Error Resume next but it doesn't work either. The message is not displayed but the script still halt. Here is the line I use. I with nothing revelent before. If I could put some setting so the script doesn't halt and I could write the error in a file that would be nice

```
Set oDoc = oWord.Documents.Open(sFrom, False, True, False)
```
