

Script Error – Maybe Group Policy?

Source:

I have a script that starts like this:

```
Dim wshNetwork, ADSysInfo, CurrentUser, objUser

Set wshNetwork = CreateObject("WScript.Network")
Set ADSysInfo = CreateObject("ADSystemInfo")
Set objUser = GetObject("LDAP://" & ADSysInfo.UserName)

Set ADSysInfo = CreateObject("ADSystemInfo")
Set CurrentUser = GetObject("LDAP://" & ADSysInfo.UserName)
strGroups = LCase(Join(CurrentUser.MemberOf))
```

I get an error on the last line with the Join command. I had this error before and upgrading to scripting engine 5.6 solved the problem. In this case it's a little different. When I'm logged in as a domain administrator to the XP SP1 computer the script runs without issue. When I'm logged in as a standard user that has the Group Policy applied I get the Join error.

Any thoughts on what might be causing the problem?
