Thanks for your help on this!

You have confirmed and changed some of my views and hopefully whats written now will be as secure as it can be, paying attention of course to your 6 points at the bottom. As you say, no system can be 100% secure.... but I'd rather be one of the strongest links, as opposed to the weakest!

Thanks greatly for your time, and yes it has helped! (If only for a greater personal understanding)

Azz
