I need to be able to query any remote member server for the rights and privs as they are configured locally on that server. So I would get a list of all rights and privs and what users have each right and priv on that server. The effort is part of checking many servers for compliance to security policies. DUMPSEC from systemtools.com is a free tool that does this, but I'd like to do the same via script.*

I am not aware about anything else than dumpsec...
