Hi Roland,

Sorry for the delay in responding, but work gets in the way.

>Tell me what else is running. BTW... I use XP with NAV Corporate to
>develop
>and debug and it works just fine so something else is interfering perhaps.

What are you after precisely? A list of running tasks from System Information or running applications and processes from Task Manager.

There are no user invoked applications running when I am debugging scrips and I make a point of rebooting my machine prior to starting to debug. Outlook Express and Internet Explorer are no in the start up file.

Thanks for patience on this, I do appreciate it.

Bob
