I have been using a Windows Remote Server to exercise the ASP scripts – was waiting for one of the universitie's departments to provide us web space on their IIS server. Well, we have got the space now. Of course, none of the scripts (including the one I have posted) now work.

More information: Some ASP pages will be accessing Access data and others MySQL – both databases will reside on servers, but not the web server. I have experimented with the code for connecting to MySQL, but have not been successful. I have tried using a DSN and DSN-less with no luck. Below is the code and error messages.

```
<% Option Explicit %>
<HTML>
<HEAD>
<TITLE>Testing our connection</TITLE>
</HEAD>
<BODY>

<%
Dim oConn, oRS
Set oConn = Server.CreateObject("ADODB.Connection")
set oRS = Server.CreateObject("ADODB.Recordset")
oConn.Open "DSN=pers_dbOdbc"

oRS.Open "tblEmployees", oConn

While Not oRS.EOF
Response.Write oRS("LastName") & ", "
Response.Write oRS("FirstName") & "<BR>"
oRS.MoveNext
Wend

oRS.Close
oConn.Close
Set oRS = Nothing
Set oConn = Nothing
%>
```

</BODY>  
</HTML>

The DSN(UID/PASSWORD not really \*):  
[ODBC]  
DRIVER=MySQL ODBC 3.51 Driver  
UID=\*\*\*\*\*  
STMT=  
OPTION=2  
PORT=  
PASSWORD=\*\*\*\*\*  
SERVER=asthma.arc.arizona.edu  
DATABASE=theDbNameHere  
DESC=

The error message:

Microsoft OLE DB Provider for ODBC Drivers error '80004005'  
[Microsoft][ODBC Driver Manager] Data source name not found and no default driver specified  
/temp.asp, line 12

Thanks for looking.
