I've found some resources with the following script, however:

```
'Script configuration
```

```
strBase=
```

```
"OU=HK,OU=Workstations,OU=HKG,DC=momo,DC=hk,DC=pwinternal,DC=com"
```

```
strComp = "WORKSTATION001"
```

```
strDescr = "Test PC"
```

```
'ADS_User_Flag_Enum
```

```
Const ADS_UF_WORKSTATION_TRUST_ACCOUNT = &h1000
```

```
Set objCont = GetObject("LDAP:// & strBase)
```

```
Set objComp =
```

```
objCont.Create("computer", "OU=HK,OU=Workstations,OU=HKG,DC=momo,DC=hk,DC=pw-internal,DC=com"
```

```
& StrComp)
```

```
objComp.Put "sAMAccountName", StrComp & "$"
```

```
objComp.Put "description", strDesc
```

```
objCom.Setinfo
```

```
WScript.Echo "Computer account for " & StrComp & " created."
```

But when it actually runs it gives me an error regarding the strComp value.... any one have ideas on how to fix this.....

I will be running the script from a DC with Domain Admin rights.....

.
