I was finally able to get some mainfram reports spooled to download to text files every morning rather than using Document Direct. The problem is that for every report that comes down every morning there are multiple copies with names the same followed by "name.#####.20071011024021.txt" for example.

I have been unsuccessful getting a script to move and rename the file.

So Far:

```
Dim oFSO
Set oFSO = CreateObject("Scripting.FileSystemObject")
oFSO.CopyFile "Q:\name*.txt", "U:\DocDirectReports\name.txt", True
```

Can anyone assist?

Thanks in advance

Live Well .. Be Happy In All You Do

Before you decide HOW to do this, you need to work out WHAT you want to do. Just renaming the files will not really work: Sooner or later you will have two of these reports, and you obviously cannot rename both to the same name. What now?
