Hi everyone,

I have a project that has been a work in progress over some time.
I am in the process of upgrading and improving, however my problem concerns
the fact I need to use custom dialog boxes.

I have been using a custom IE dialog box which, to be honest I don't have
a huge understanding of, but have got working within my code.
I now need to create a custom IE dialog with dynamic content.

This dialog uses a mix of radio, check, select and text inputs.

The radio selections are within one group – 3 of them are static but more
may need to be added on the fly.

There is one checkbox that is static, a dropdown (select) which is static
and a checkbox that is static.

I know this is a fairly loose description, but could someone help me with
the required code to use and support the IE dialog box.

PS. I have a fairly good understanding of VBScript for the majority of
projects I have undertaken, but I am somewhat lacking when it comes to
using IE dialogs with VBScript.

Many thanks, Bill.

I can only offer an example that might help. This uses IE to display a box
that indicates progress in a program. I use it when my script may take some
time:

Re: Custom dialog boxes

I think it is based on work by Tom Lavedas. You can search the microsoft.public.scripting.* newsgroups for more examples.
