Hello,

I don't have this control installed on my pc

```
Set id3 = CreateObject("CDDbControl.CddbID3Tag")
```

Is there a different way of writing the id3 tags in an mp3 file, maybe using MediaPlayer?

So far, I read the tags from the shell with objShellFolder.getdetails of and populate an excel file.

I would like to modify the sheet and feed a new script in order to commit the changes.

The only thing I cannot do is set the tags.

If there is nothing built-in which allows this, do you think I can freely put my script on the internet together with the cddbControl to be installed?

It's not a job, it's just for fun. Otherwise I would use one of the existing freewares.

Not really a job for VBScript since you are asking to write binary files. In such situations I would first try and use an open platform scripting language like perl <http://cpan.uwinnipeg.ca/search?query=mp3&mode=dist>

At the above page you will see what a variety of perl modules are available for working with mp3 and mpeg audio.

I have personally used Mp3::Info to add an APIC tag (album art) to songs.
