my computer caught this virus and i don't know how to get rid of it.

I have been looking for a solution but it's quite hard to find anything about this trojan on the net.

I disabled my system restore, restart my pc into safe mode but when i tried to run my antivirus it didn't work.

My OS is WINDOWS XP PRO, an the antivirus i am using is AVG 6.0 (free edition)

I really need some HELP!!!
