Just install WSH 5.6 and create a flag file so you only do it once (disregard the the last batch file in the link below that installs a WSH security update, the update is included in the latest WSH you can download from <http://msdn.microsoft.com/downloads/list/webdev.asp>):

<http://groups.google.com/groups?selm=3C9FF277.9F8392C7%40hydro.com>

For Win95, you will need to install WSH 5.5, or downgrade Wshom.ocx:

<http://groups.google.com/groups?selm=ug6qtZ7MEHA.2708%40TK2MSFTNGP11.phx.gbl>

- > *WMI 1.5*
- > *ADSI 2.5*

For WMI and ADSI, you only need to check those for WinNT 4.0 and Win9x (they are included in Win2k and WinXP).

To check version, it would be easiest to use a WSH based script:

To see if WMI is installed:

The existence of <windows system dir>\WBEM\Wbemcore.dll is one way to test (and get the version):

<http://groups.google.com/groups?selm=3E4A951B.4D8C298E%40hydro.com>

I think the latest WMI Core for WinNT (and I would think for Win9x as well) installs version 1.50.1085.0001 of Wbemcore.dll.
