Bonjour,  
you can use a program called reg.exe to load/unload hives  
in regedit.

> Is there a way to load a hive into the Regedit. I  
would like to load a user's NTUSER.dat file into the  
registry and then make a couple changes on it. Then  
unload the hive. To do it manually, I would click on  
HKEY\_USERS, then click on File and "Load Hive". I would  
then navigate through Documents and Settings to find the  
profile I need to edit, select the ntuser.dat file and  
load it. Then I can make changes. When I'm done, I hit  
File then "Unload Hive".
