I am ftping a directory of files using a bat file called from a wsh file.

All is working fine with one exception.

I cannot get the ftp command line to close when using MPUT – the ftp command to upload multiple files.

It will work if I use PUT with one file.

this is the contents of the bat file
ftp -s:filename.txt myftpsite.com

below are two version of the commands within the filename.txt referenced above..

this will not work... It uploads no files and does not close the ftp connection.

```
username
password
binary
CD ecreditexperts
CD www
CD admin
CD doc
mput "D:\work_tasks\cpi_sales\sales\*.Doc"
bye
```

this works – uploads the one file, and then closes the ftp connection and then the command window.

Exactly what I want it to do... But I need to upload ALL the files.

```
username
password
binary
CD ecreditexperts
CD www
CD admin
```

microsoft.public.scripting.wsh: ftp via bat called by wsh

```
CD doc  
put "D:\work_tasks\cpi_sales\sales\file.Doc"  
bye
```

What am I doing Wrong?

thanks for the help
Kim
