Hi,

Hard to tell which is line 41, but perhaps this is the line:

```
Set oDomain = GetObject("LDAP:// & wscript.Arguments.Named("ou")  
& "." & rootDSE.Get("defaultNamingContext"))
```

To avoid word wrap problems, I used the line continuation character " ". My guess is that the argument is the name of the ou and you need to append "ou=" in front. Perhaps:

```
Set oDomain = GetObject("LDAP://ou= & wscript.Arguments.Named("ou")  
& "." & rootDSE.Get("defaultNamingContext"))
```

I have a bunch of scripts from an MS toolkit ?Windows administrators automation toolkit? and one in particular is driving me batty.
This script modifies an attribute of all the accounts in a specified active directory container.
It works fine when it is applied to all accounts in the domain. But Ham Handed administration is not what I am looking for. I am trying to target the script at a specific OU in the domain. When I do that it kicks out an error message.

It says that:

[script ChangeAttrib.swf](#)

Re: Changing user attribute in AD script driving me batty

line 41
char 3
error An invalid dn syntax has been specified
code 800072032
source null

It seems to be an issue with the script. since I have the correct version of wsh, and I have full AD admin rights (including schema edit). AND since it DOES work when no OU is specified.

Here is the script

```
<?xml version="1.0" ?>  
<package>  
<comment>  
PrimalCode wizard generated file.  
</comment>  
<job id="ChangeAttrib" prompt="no">  
<?job error="false" debug="false" ?>  
<runtime>  
<description>  
Change attribute value for all users. Works with single-valued  
attributes only.  
  
/attrib: specifies name of attribute.  
/value: specifies new value.  
  
Other arguments are optional.  
</description>  
<named helpstring="Display status messages" name="verbose"  
required="false" type="simple"/>  
<named helpstring="Specify OU to start in" name="ou" required="false"  
type="string"/>  
<named helpstring="Name of attribute to change" name="attrib"  
required="true" type="string"/>  
<named helpstring="New attribute value" name="value" required="true"  
type="string"/>  
</runtime>  
<script id="Lister" language="VBScript">  
<![CDATA[  
'change attribute values for multiple user accounts  
  
'check required arguments  
If Not WScript.Arguments.Named.Exists("attrib") Or  
Not WScript.Arguments.Named.Exists("value") Then  
WScript.Echo "*** One or more required arguments missing"  
WScript.Arguments.ShowUsage  
WScript.Quit
```

Re: Changing user attribute in AD script driving me batty

Re: Changing user attribute in AD script driving me batty

End If

```
'connect to the root of AD  
Dim rootDSE, domainObject
