Hi there,

I try to disable Directory Inheritance via XCACLS.VBS by copying the existing ones with the /I-Option.

Doing so results in an error message:

Command-Line:

```
xcacls D:\temp /i copy
```

ErrorMessage:

Directory: D:\temp

Error -2147217404: occurred setting RetVal =

objFileSecSetting.ExecMethod_("SetSecurityDescriptor", objInParam) (Msg#4306)

Error description: Fehler beim Anbieter --> Means: Error from supplier

The other /I-Switches (REMOVE, ENABLE) work fine.

Any ideas?

Regards

Jochen
