I'm trying to set up my development environment to start developing Sharepoint Applications using VS.NET 2003. I followed the instructions from the following page

<http://msdn.microsoft.com/library/default.asp?url=/library/en-us/spptsdk/html/tsovVSNETIntro.asp>

But am getting the following error message when connecting to the remote server.

--

Microsoft Development Environment

The Web was created successfully, but an error occurred when trying to configure the application root for this Web. Web projects may not operate correctly without an application root. The returned error was: Active Directory Services cannot find the web server. A possible cause for this is an incompatibility between versions of Internet Information Server (IIS) on the client and the server. The usual cause for this error is creating Web projects on a Windows 2000 or newer server from a Windows NT 4.0 client. You can manually configure the application root using the Internet Services Manager.

and

Microsoft Development Environment

Unable to set the permissions on the 'bin' folder to restrict browse access. Active Directory Services cannot find the web server. A possible cause for this is an incompatibility between versions of Internet Information Server (IIS) on the client and the server. The usual cause for this error is creating Web projects on a Windows 2000 or newer server from a Windows NT 4.0 client. You can manually restrict browse access to this folder using the Internet Services Manager.

--

The following is the discription of the error message and have followed the instructions on IIS installation on the Client (since the 2nd option requires installing FP extension and Sharepoint does not function with FP extensions installed) ... I reinstalled the IIS on my XP development box and have gotten the same error message.

<http://support.microsoft.com/default.aspx?scid=kb;en-us;320451#kb4>

Has anyone got this message before and what would be my next step to start development in VS.NET. And lastly, I am on a non-AD network, i.e. no Active Directory.

TIA!
