Hello,

I already asked yesterday. I can not add a webpart within a ascx control on the mysite's private view during a get request. The error is

Updates are currently disallowed on GET requests. To allow updates on a GET, set the 'AllowUnsafeUpdates' property on SPWeb.

I already changed the web, site and generaladmin's AllowUnsafeUpdates properties.

see:

http://groups.google.de/group/microsoft.public.sharepoint.portalserver.development/browse_thread/thread/40c1914c65

I found several posts about this error but no solution. Any ideas?

Perhapes a hint from microsoft if is is general not possible to change the individual mysite programmatically?

Regards,
Michael
