Hi,

I'm developing a web service to save and get info from my extranet sql db.

When I run the web service from Visual Studio 2005 and invoke a method that retrieves me info from the db, it throws me an "Page cannot be found" message, where its suppose to work.

I think its a security issue, but I don't know precisely which is.

I don't know why this is happening :S

It's got me crazy!

If you have any questions just ask me.

Thanks,

Brian
