\viewkind4\uc1\pard\lang2052\fs20 Thanks for your reply Jrl,

\par

\par Since the website is an ASP.NET one, has it ever been extended by WSS? This is important since a site be extened by sharepoint service will make it different from a standard ASP.NET extended IIS site. And the commandline utility you mentioned earlier is a sharepoint 2003 tool.

\par

\par Also, you mentioend the "<http://x.com> url, have you added custom host header for the IIS site, and if so, have you also added host header record on the machine or you've DNS record for it?

\par

\par Sincerely,

\par

\par Steven Cheng

\par Subject: Re: installing frontpage server extensions

\par Date: Thu, 15 May 2008 13:49:12 -0700

\par

\par

\par I am using Vista, trying to open an Asp.net web site on the same computer that has Visual Studio 2008 installed.

Re: installing frontpage server extensions

\par When I attempt to open the local IIS site, Visual Studio responds "Unable to open the web site "http://x.com. The web server does not appear to have FrontPage Server Extensions installed."

\par

\par It was in response to this error message that I found the patch to install the extensions (I provided the link below).

\par I can open the site as a file system type of web site, but not as a local IIS type site.

\par
