Hi

I have a CMS 2002 site with the web server in a box and the sql server in another.

Both machines can't see each other, besides the ports 80 and 1433 (for SQL Server), but the IE doesn't have any proxy.

Sharepoint 2001 is indexing the site (from the box with the web server) for search purposes, but a great number of pages are skipped because of "operation timed out" error.

I noticed the IIS is a little slow sometimes, but never more than 10 to 15 seconds, and the query time limit (in SPS) is 9999999 and I still get the same error.

It's curious that the problem is not always in the same pages, so I'm guessing it could be because of IIS or the cache.

I tried indexing using http://>/<cms_path but the result is the same.

Any pointers??

Thanks in advance.

Error transcript from the indexing log:
