I have two documents one is in Word Format and the other is in Excel Format. I have about 10 hyperlinks in Excel file, that will open corresponding word or excel files.

My problem is:

I am uploading the first Word document into spps2003 document library, this word document contains the Hyperlink to open the Excel document and within this Excel document, i have about 10 hyperlinks.

Now these all hyperlinks in Excel document should open.

Navigation: Word document(has hyperlink) --> by clicking on this hyperlink --> Excel document opens(With in this there are 10 hyperlinks) --> each hyperlink in excel document should open corresponding document.

How to do this?

Any Ideas, Please Help
