Shane:

You're right. This is the problem. Now how do I get ny\svcSP out of the cache. I've tried several things but it still hangs in. I'm running XP pro and IE6.

The best result I've had was shutting down the intranet zone and forcing a login using my domain account and password and clicking Remember my password. This seems to have put in in the cache ahead of the service account so when I reinstate the intranet zone I am myself again. I'd still like to get the other account out of the cache.

Any other ideas on how to get it out permanently?

Ralph
