In answer to the first part of your question, would suggest you take a look at the article by Mindsharp called "Best Practices for Designing and Deploying a SharePoint Portal." It's under Premium Content at www.mindsharp.com. It's free, but you do have to register with the site to view it. It deals specifically with the decision to use one or multiple portals, among other lots of other very useful topics.

Give this a try re: your second question:

<http://www.spsfaq.com/extranet.asp>
