The web site says that the web part contacts them. (At least that's my understanding of the text)

To ask what address (and port?) it is using for this you could send e-mail to arjan.nataraj@xxxxxxxx which is the address on the contact page.

The title says "SharePoint app" but the text just says "third part app".

If you tell us which third-party application you are using we might be able to help better.

Or is it a secret :)

Re: Sharepoint app and proxy server problem

Hi,

I am using a third part app and therefore have no access to code behind etc...

The app needs to connect to the internet but as I am behind a proxy server

I think the app is looking for a user auth to access the internet so I am getting the below error.

I use ISA Server and wondering is there a way that anyone knows of to get around this problem.

Thanks.

An error occured:The request failed with HTTP status 407:
Proxy
Authentication Required (The ISA Server requires
authorization to
fulfill
the request. Access to the Web Proxy service is denied.).
