hi again

first of all, thanks 4 your reply

what i want to do is set permissions on document library level in a sharepoint site.

now what i have to do is set them step by step.... :(

If u can help me ... thanks in advanced.

salva.

You asked for some sample code to add users to the group.

The following ldifde script will do the job much more simply than dot net

you'll need to change the dn of the group to reflect the location of the group in your own AD, likewise for the users.

Create a file with the following in it (not the dash on the last line is important). call the file addmembers.ldf.

There's tonnes of documentation on the web on ldifde.

```
dn: CN=Test Group 1,OU=myou, DC=DEV,DC=test,DC=COM
```

```
changetype: modify
```

```
replace: member
```

```
member: CN=user1,OU=myou,DC=DEV,DC=test,DC=COM
```

Re: Adding domain users to a site document library from command–li

member: CN=user2,OU=myouDC=DEV,DC=test,DC=COM

–

use this command line to run it (not the location of the ldifde program may vary – if it's not on your windopws server already, you can download it free form microsoft)

```
LDIFDE.exe -b adminaccount DC=DEV,DC=test,DC=COM * -i -f "AddMembers.ldf" -j  
"logs\ADGroupsImport_AddMembers"
```

Hi Indigenous

can you send me this example to my mail address?

Thanks a lot

Salva.

Indigenous wrote:

You could just add an NT security group account to the library then you problem is simply one adding users to an NT group (outside of sharepoint). I suspect there are plenty of examples of how to script that on the web. The only example i have is using .NET and the DirectoryServices assembly.

Hi

i'm looking for an script or something to add users to document libraries stored in sites.

Anyone know how to do it? I have one script made for SPS2001 to do this, but for SPS2003 i dont know if it can be possible (i hope it :D)

I want to use it to add permissions in a batch

Re: Adding domain users to a site document library from command-li

process (quickly than
GUI...)

Thanks

Salva.
