Hi Ramu,

I am also facing the same problem..... i should also create a test server from existing production ... but the restore process is failing in the event logger there is information available that "Content index restore failed. "

Once you come to know the way to do it.... please let me know it will of great help.

Thankyou.

Hi

I have two instances of Sharepoint. One is test and the other one is production. I want to bring all the pages and data from the production to the Test Server. For that purpose I tried to backup and restore the databases in production to Test. However, it doesnt seem to work.

I restored the following databases

1. XXXX_PROF
2. XXXX_SERV
3. XXXX_SITE

is there any thing else which I need to do? or will this the right way of doing this? Please advice

Thanking in advance

Regards

Ganesh
