Hi All --

I am about to begin a project using MOSS 2007 that has some fairly involved workflow. I plan to use InfoPath 2007 (most likely) as the data collection method & then Designer or VS 2005 to build the Workflow. The Workflow basically involves Users approving/rejecting Application access, updating Action Items and similar.

My question is: is this all possible given that the company does NOT plan on deploying Office 2007 this year ? My Beta would need to use Office 2003 / IE as the platform. I don't think there is a need for digital signatures...just filling out an InfoPath 2007 form or (later in the WF) updating a custom list on MOSS 2007 prompted by e-mail alerts in Outlook 2003.

Thanks for you time,
Geoff G.
