I'm the newly hired Sharepoint Administrator for a company in Dallas. We have a migration project where we're migrating our Sharepoint sites from a single underpowered stand-alone server to a small sized web-farm. That in and of itself isn't too difficult. The challenge I face is the fact that the current stand alone server was inadvertently installed with MOSS 2007 Enterprise Edition when it should have been the standard edition. We want to build the new farm with Standard and therein lies the challenge.

Has anyone ever successfully migrated sites from Sharepoint 2007 Enterprise to Standard? If so how?

Any suggestions are greatly appreciated.

Lance Wilson
