What upgrades do you mean. Surely you don't mean that you are trying to install WSS on top of STS ?? There's no way that wil work.

Just in case that IS what you mean, then you should look at smigrate (see WSS FAQ site / Useful Documents / MS Articles / Downloads). You need to prepare your STS site in the way required by smigrate and then run that. You then should install WSS on a separate server (see the WSS FAQ for how to do that) and run smigrate there to get your STS stuff across.

If you have any more questions please post them at the WSS newsgroup

microsoft.public.sharepoint.windowsservices

But read the smigrate documentation before you do.
