Hey Guys,

Got a problem with time differences between my Sharepoint 2003 site and my SQL content datase. Basically what is happening is the time created for entries in my document libraries are showing correctly in Sharepoint, but when i look at those same entries in the SQL Database for sharepoint the time difference is +9:00, this is a pain for reporting purposes. I've double checked all the regional settings for the sites and the portal and they are set correctly / the same as the Regional settings on the SQL server i.e WSS(Site Settings/Site Administration/Change Regional Settings) and also SPS(Site Settings/Central Administration/Configure Virtual Settings/{Virtual Server}/General Settings . My question is, are there any other locations the regional settings are set?

.
