I have searched and searched, both on Google, forums and on the different FAQ pages but I cannot find out how a user can move a file from one folder to another from within the web GUI.

I know I am able to move a file when connecting to the server using My Network Places and doing a normal file move command, but most of my users don't have access to this.

Probably an extreme newbie question, but someone of you guys are probably able to help me out?
