This may not help, but I make sure I have deleted web parts that are no longer being used on the page, rather than just closing them.

When you "close" a web part it remains in the web part page gallery and is still associated with the page. If you open the page in Frontpage 2003, a greyed out form of closed parts still appear in design view. I found that pages with lots of closed web parts took a long time to load in frontpage, and it was much quicker after deleting them.

I suspect these web parts are loaded on the server when the page is requested, even if they aren't sent to the browser, so it might be worth deleting them – I do this by dragging them back onto the page, then deleting them.
