At some point you've logged in and told it to remember your username and password. Two fixes for this come to mind immediately. There may be others.

- 1) Change the administrator's password temporarily. When the cached password doesn't work, you'll get prompted to authenticate. After you've logged in as scott, set the Administrator password back.
- 2) In IE go to Tools -> Internet Options -> Custom Level. Scroll all the way down to "User Authentication." Check "Prompt for user name and Password." Close all your IE windows. Now when you hit the site you should get prompted.
