The menu on my home page adds a parameter to the url. This is how I did it with the concat directive...

Look for this line of code

```
< SPAN><a><xsl:attribute name="href"><xsl:value-of select="@DisplayName"/>
```

Now we need to add the tool tip using the Title field, replace the href value with with the URL Path (@FileRef is the URL Path field that you see in the DataSource Properties for a document library) and append the Menu name so that we can try and use it in the future to expand the correct menu.

Replace the code above with

```
<a title="{@Title}"><xsl:attribute name="href"><xsl:value-of select="concat(@FileRef, '?menu=', @Menu)"/>
```

Adding an onclick event is a bit more complicated but I have done this also

<http://www.wssdemo.com/Pages/visio.aspx?menu=Articles>

This demo updates the scr attribute of an activex control on the page.

Regards,

Ian
