How do I determine this, under IIS 6.0 there is listing for

Internet Information Service  
ServerName (local computer)  
Application Pool  
Default App Pool  
Web Site  
Default Web Site  
Web Server Extensions  
Asp.Net 1.1.4322 Allowed

I do not remember getting any error upon installation of WSS , however I had to wait several hours to restart PC as Music On Hold runs on this server and can't turn it off during work hours.

Upon restart I have never gotten a Web Page as indicated in installation instructions.

Right Now, I need to start from scratch.... How far do I go. I have uninstalled WSS, what else needs to happen to get a fresh install?

Thanks

.
