Hi,

I currently have two lists one of which contains a list of suppliers which are split into two categories using a choice field and the other shows projects which includes a lookup to the suppliers' names.

What I need to do is filter the projects based on the category of the supplier. IE

List A

Supplier Name Category
Company A Legal
Company B Other
Company C Legal

List B

Project Value Supplier
Project 1 £x Company A
Project 2 £x Company B
Project 3 £x Company C

In this instance I would need to be able to choose "Legal" or "Other" and therefore return Projects 1 and 3 or Project 2 on its own depending on the value chosen. I know that web part connections would allow me to filter list B based on list A but as far as I know I could only filter based on one company and not all companies having Category="Legal".

Is there a way to do this?

Thanks,
Gavin Dellbridge
