Gordon, are you running Portal Server on us? Be honest, you can tell us.

The folks in this group (myself especially) only deal with WSS and have never touched SPS in any fashion. If you're running SPS you'll have better luck asking in an SPS group or the general Sharepoint group. Make sure and let them know you're running SPS and which version. They like that.

tk

We're running both WSS V2 and portal 2003 on the same box. The alerts issue was occurring on both services which run within the same piece of hardware and began after a SQL server move. We did fix the alerts on WSS late yesterday however portal was continuing to be a problem. We've now fixed the portal issue overnight but I've not had a chance to speak to the sysadmin about the fix.

I've tried to post relevant issues in both the SPS NG and WSS NG, we're just not too sure how these two services are intertwined.

Thanks

Jim

We're seeing the following error:

Event Type: Error
Event Source: Microsoft SharePointPS Search Service
Event Category: SubPi
Event ID: 2003
Date: 8/2/2006

Re: Alerts not able to be set

Time: 9:17:31 AM

User: N/A

Computer: MPWWW

Description:

The alert plug-in for catalog Portal_Content failed to recover. Status is 80004005.

That's odd. I guess the next thing I'd check is Event Logs on the IIS and SQL servers if you haven't already. If there's nothing in there you want start watching what's going on with a SQL trace or something. That's really odd.

Have you verified that Alerts are turned on for the site and that the user hasn't exceeded the number of allowed alerts?

tk

Answer to question 1.

Alerts

Specify the default settings for e-mail alerts on this virtual server.

Show me more information.

Re: Alerts not able to be set

Alerts on this server are:

On

Answer to question 2.

Maximum number of alerts that a user can create:

Unlimited number

We made a
move from
MSSQL
server A to
server B.
After this
move we
are
no
longer able
to set alerts.
After about
20 sec. we
receive this
error:
An
error has
occurred on
the
server.
We're
thinking the
alerts
function
might still
be pointing
to
the old

Re: Alerts not able to be set

server. Any
ideas where
to look to
fix this by
pointing to
the
new server?

Jim
