Thanks for your reply.

FYI – I should have stated that i have 4GB RAM (insitu) and I had already re–run the wizard (and command line) more than once without any success. Always stops in exactly the same location. Do you have any further suggestions...???

Maybe i should be contacting another newsgroup.... would you suggest any specific newsgroup to resolve this issue?

I've installed wss3.0 previously without a single problem (having at least 10 successful installations under my belt, including SBS). I can't work out what has changed apart from some additional OS critical updates.

With Regards,

Alchemy

Engelbert wrote:

This is a common error (and all problems seem to be with the configuration wizard)

Two things might help.

– running the configuration wizard again (probably will get you past this point but will finish somewhere else instead, but might go right through)

– adding memory before running again. MOSS 2007 for instance seems to often need 1GB before installations go through OK although I've not seen this with WSS yet.

Also, you don't say whether this (Win2k3) installation is to a machine already running WSS v2 or not.

Re: Surely someone has come across this problem before.....

I wouldn't even bother with an SBS 2003 installation. There you do have an existing WSS v2 and Microsoft have said recently that they haven't yet tested installing on SBS 2003 boxes.

news:1155785863.170388.321160@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

I'm trying to install WSS3.0 beta 2 on a WIN2k3 box. I have this problem on two machines (NB: One of the boxes is a SBS2k3). Both are fully service packed with all security updates installed. SQL2k SP4 is also installed on both boxes....

I've installed all the prerequisites for WSS3.0 beta 2
I've successfully installed WSS3.0 beta 2
I've unsuccessfully run the Sharepoint Products and Technologies Configuration Wizard.

Step 1: the prescan worked just fine.....
Step 2: fails to create the databases (see below)

```
C:\Program Files\Common Files\Microsoft Shared\web server  
extensions\12\BIN>psco  
nfig.exe -cmd configdb create  
SharePoint Products and Technologies Configuration Wizard version

Event Category: Database

Event ID: 4972

Date: 8/17/2006

Time: 10:19:16 AM

User: N/A

Computer: AMWA01

Description:

The SQL Server collation on SQL Server instance
'AMWA01\Microsoft##SSEE' is not supported. Windows SharePoint
Services
requires a Latin1 General dictionary order, case insensitive, accent
sensitive, kana sensitive, and width sensitive collation
(Latin1_General_CI_AS_KS_WS).

For more information, see Help and Support Center at

<http://go.microsoft.com/fwlink/events.asp>.

Event Category: Database

Event ID: 4972

Date: 8/17/2006

Time: 10:18:19 AM

User: N/A

Computer: AMWA01

Description:

The SQL Server collation on SQL Server instance 'AMWA01\Microsoft##SSEE' is not supported. Windows SharePoint Services

requires a Latin1 General dictionary order, case insensitive, accent sensitive, kana sensitive, and width sensitive collation (Latin1_General_CI_AS_KS_WS).

For more information, see Help and Support Center at <http://go.microsoft.com/fwlink/events.asp>.

Does anyone have any idea how to resolve this matter? I have completely uninstalled and reinstalled all the WSS 3.0 components – regardless of what i have tried, this problem continues to persist.

Re: Surely someone has come across this problem before.....
