I'm experiencing the exact same issue. We had no issues during installation, only in viewing the CA site. Cancelling the username/password prompt doesn't prevent viewing/using the pages.

Has anyone found a resolution to this?

Thanks in advance!

I have setup WSS 3.0 on a Win2k3 server and have been having issues with getting anything to work in it.

I load up Central Administration and it prompts me for my password several times. This happens anytime I attempt to do anything on the site (including mouse over the menu bar).

In addition, none the form functionality to administer the site works. I get "Error on Page" notices if I do anything but hit Cancel.

I have added the site to the Trusted Sites in IE and have all the required prerequisites installed.

Anyone have any ideas?

Thanks in advance for any help.
